Learning sentence representations from natural language inference data

Konstantin Todorov, No. 12402559
Statistical Methods for Natural Language Semantics
University of Amsterdam

Github repository link - https://github.com/ktodorov/uva-semantics-19

For all models we can observe that hypotheses where almost all of the sentence is similar to the premise the model predicts correctly as entailment but if the differences in the hypothesis become more complex then the models fail to predict correctly

1 Mean encoder

- test macro accuracy: 61.4346%
- test micro accuracy: 61.4413%
- SentEval

	devacc	**acc**	**ndev**	**ntest**
